Industrial Production increased 8.0% in June 2013

Production for Manufacturing Industries for June 2013 was 8.0% higher than in May 2013 (*see above and Table 1*). On an annual basis production for June 2013 increased by 2.7% when compared with June 2012. The seasonally adjusted volume of industrial production for Manufacturing Industries for the quarter April 2013 to June 2013 was 3.3% higher than in the preceding quarter (*see above and table 4*).

The “Modern” Sector, comprising a number of high-technology and chemical sectors, showed a monthly increase in production for June 2013 of 6.5%. There was a monthly increase of 6.8% in the “Traditional” Sector (*see table 2*).

There was an increase of 8.9% in the seasonally adjusted industrial turnover index for Manufacturing Industries in June 2013 when compared with May 2013 (*see above and table 7*). On an annual basis turnover increased by 8.2% when compared with June 2012.

Unadjusted data is available on the CSO website at <http://www.cso.ie/en/databases>

For more information contact Sean Hurley at 021 453 5242, Alan Finlay at 021 453 5211 or Susana Portillo at 021 453 5640.

Background Notes

Introduction The monthly industrial production index monitors current trends in the volume of production of industrial local units with three or more persons engaged. The primary purpose of the index is to measure changes in value added at constant prices.

The monthly index of turnover measures the change in the level of sales each month of industrial products, whether manufactured in the month in question or in previous periods (excluding non-industrial activity where practicable). The turnover indices outlined in this release are exclusive of VAT.

The principal difference between the production and turnover indices is that the production index traces the quantitative volume of production (i.e. effect of price changes excluded) each month whether sold or not, whereas the turnover index reflects both the volume of sales and the price level. Starting with January 2009 updated industrial production and turnover indices are being published to base year 2005=100.

The new orders indices measure trends in new orders accepted, including those received and filled during the last month. Orders are valued at the amounts invoiced or still to be invoiced (excluding VAT).

The response rates for the provisional results are typically 46% in terms of the local units surveyed covering 84% of the value of production and 82% of the value of turnover. The corresponding figures for the final results are 58%, 91% and 90% respectively. These response rates are based on averages for a 12 month period ending September 2009. In September 2009 an additional question on response burden showed that respondents took an average of 19 minutes to complete the monthly inquiry form.

Sample covered The monthly survey which provides data for calculating the indices covers the larger local units which between them account for the bulk of industrial output – in general those which in the base year 2005 had twenty or more persons engaged in NACE 5 to 35. For certain sectors the threshold of 20 persons engaged is lowered where this is considered necessary to ensure representativeness of the sample or where data for a sector would have to be kept confidential if the 20 persons engaged threshold were applied. The business activity classifications are based on the Statistical Classification of Economic Activities in the European Community (NACE Rev. 2).

Methodology Working day adjusted individual production, turnover and new orders sub-indices are compiled for each detailed NACE class. These sub-indices are combined to provide the indices for broader sectoral groupings, using as weights for a sector the gross value added at factor cost for production indices, and turnover in goods produced and industrial services provided to others for turnover and new orders indices, for all units in that sector covered in the 2005 Census of Industrial Production (CIP). Weights and base year are revised every five years.

The production index is compiled using two methods. One method is based on the valuation of quantity data at base year prices. The series has been compiled using updated prices from the Prodcom 2005 survey. Alternatively, in cases where reliable quantity data cannot be obtained current value data is converted to values at base year prices using suitable Wholesale Price Index (WPI) deflators.

New orders indices have been produced from January 2004 onwards using reported monthly orders data. In the event of non-response, the reported turnover is used as an estimate for the calculation of new orders indices.

Seasonal Adjustment Seasonal adjustment is conducted using the direct seasonal adjustment approach. Under this approach each individual series is independently adjusted, e.g. aggregate series are adjusted without reference to the component series. Seasonal adjustment models are developed for each series based on unadjusted data spanning from January 1998 to the current period. These models are then applied to the entire series. Seasonal factors are updated each month.

The adjustments are completed by applying the X-12-ARIMA model, developed by the U.S. Census Bureau to the unadjusted data. This methodology estimates seasonal factors while also taking into consideration factors that impact on the quality of the seasonal adjustment such as:

- Calendar effects, e.g. the timing of Easter
- Outliers, temporary changes and level shifts in the series

For additional information on the use of X-12-ARIMA see (Findley, D.F., B.C. Monsell, W.R. Bell, M.C. Otto, and B. Chen (1998), "New Capabilities and Methods of the X-12-Arima Seasonal Adjustment Program", *Journal of Business & Economic Statistics*, 16, pp. 127-177.)

NACE classification

The business activity classifications used in this Statistical release are based on the Statistical Classification of Economic Activities in the European Community i.e. NACE Rev. 2. The main change for the Industrial Production and Turnover release is the reclassification of local units in the Publishing sector (NACE Rev 1.1 22) to the Services sector (i.e. outside the scope of this release).

Other changes mean that there are separate NACE groups for Food products (NACE 10), Beverages (NACE 11), Chemical and chemical products (NACE 20) and Basic pharmaceutical products and preparations (NACE 21).

The descriptions of particular NACE Rev. 2 sectors are sometimes shown in abbreviated form in the release. For further information on the NACE Rev. 2 classification of industrial activity, visit the CSO website:

<http://www.cso.ie/en/surveysandmethodology/classifications/classificationofindustrialactivity/>

Definitions

All Industries

All industries is comprised of all sectors classified NACE 05 to 35 inclusive. This includes Mining and quarrying NACE 05 to 09, Manufacturing Industries NACE 10 to 33, and Electricity, gas, steam and air conditioning supply NACE 35.

Manufacturing Industries

Manufacturing Industries is comprised of all sectors classified NACE 10 to 33 inclusive.

Transportable Goods Industries

Transportable Goods Industries is comprised of all sectors classified NACE 05 to 33 inclusive. This includes Mining and quarrying NACE 05 to 09 and Manufacturing Industries NACE 10 to 33.

"Modern" Sector

Modern sector includes the following industrial sectors

NACE 20.00 - 21.20	Chemicals and pharmaceuticals
NACE 26.00 - 27.90	Computer, electronic, optical and electrical equipment
NACE 18.20	Reproduction of recorded media
NACE 32.50	Medical and dental instruments and supplies

"Traditional" Sector

Traditional Sector includes All Industries (NACE 05 to 35) excluding "Modern" sector as detailed above.

Retrospection

Indices calculated under the previous system (NACE Rev1.1 and base year 2000) have been re-cast in order to make comparisons with earlier periods. When making comparisons with data produced in previous monthly industrial production and turnover releases (classified by NACE Rev. 1.1 and NACE Rev. 70) it should be noted that the content of NACE Rev.2 sectors can be quite different from that of similarly-titled NACE Rev. 1.1 and NACE Rev. 70 sectors.

Updated Wholesale Price Index (Base Year = 2005)

The wholesale price indices were revised in June 2010 to include updated weights (base year = 2005) and to allow for the NACE Rev. 2 reclassification of the indices. New base year weights were compiled for the Wholesale Price Index using the results of the 2005 Census of Industrial Production (CIP) and the Prodcom Inquiry surveys. New baseweights were applied to each three digit NACE group on the basis of the Census of Industrial Production and the commodity groups weights were assigned on the basis of the Prodcom Inquiry. The business activity classifications used in the updated WPI series are based on the Statistical Classification of Economic Activities in the European Community i.e. NACE Rev. 2. The main change arising from the adoption of NACE Rev. 2 is the reclassification of local units in the Publishing sector (NACE Rev 1.1 22) to the Services sector. Other significant changes include separate NACE divisions for Food products (NACE 10), Beverages (NACE 11), Chemicals and chemical products (NACE 20) and Basic pharmaceutical products and preparations (NACE 21).

For further information on the updated WPI indices see the CSO publication *Wholesale Price Index, Introduction of Updated Series Base Year 2005 = 100*

<http://www.cso.ie/en/media/csoie/releasespublications/documents/prices/2010/wpiintro05.pdf>

Prior to the adoption of the updated WPI indices industrial production mapped the WPI indices from NACE Rev. 1 to NACE Rev.2 to create deflators for the industrial production indices.
